

CH. 5, L8 – EXIT SLIP

Objective: Given a system of equations, I will determine if the system has one, no, or an infinite number of solutions algebraically

1. Determine the number of solutions to the system given below. If there is one solution, calculate and check it.

$$\begin{cases} 3x + 4y = 6 \\ y = -\frac{3}{4}x + \frac{3}{2} \end{cases}$$

CH. 5, L8 – EXIT SLIP

Objective: Given a system of equations, I will determine if the system has one, no, or an infinite number of solutions algebraically

1. Determine the number of solutions to the system given below. If there is one solution, calculate and check it.

$$\begin{cases} 3x + 4y = 6 \\ y = -\frac{3}{4}x + \frac{3}{2} \end{cases}$$

2. Determine the number of solutions to the system of equations and explain one thing you could do to change the system so that it has a different number of solutions.

$$\begin{cases} 2y - 5x = 7 \\ -8y + 20x = 28 \end{cases}$$

2. Determine the number of solutions to the system of equations and explain one thing you could do to change the system so that it has a different number of solutions.

$$\begin{cases} 2y - 5x = 7 \\ -8y + 20x = 28 \end{cases}$$
